Planting Palette - South Kingsville Pre School

Notice: During establishment, generally in the first 12 months, it is strongly recommended that all areas of planting are protected from heavy traffic, with the areas clearly marked that have thin areas covered with thick grass and 1 meter away from plants (approx). This will give plants a better chance of surviving beyond establishment.

All species listed in the suggested palette are selected for their suitability for an early childhood setting, not only tolerance of periods of low rainfall, since established, generally tolerant of occasional damages from children's "throwing" for play and foot traffic. Areas may need occasional watering of all for good growth and damage repair. This should be considered part of the routine maintenance program.

The fall below is limited as a suggested palette from which to select a view of all plants selected.
